DETAILED ACTION

1. This is in response to the amendment filed on March 4, 2009. Claims 50, 51, 54-61, and 64-70 are pending and have been considered below.

Allowance

2. Claims 50, 60 and 70 have been amended with written arguments, which overcome the examiner's prior rejection see argument of 03/04/2009. Examiner withdraws all outstanding rejections
3. Claims 52, 53, 62 and 63 have been cancelled.
4. Claims 50, 51, 54-61, and 64-70 are allowed.

Examiner's Statement of Reasons for Allowance

The following is an examiner's statement of reasons for allowance

5. Gullman et al (US 5,280,527) discloses a security device/method receives a biometric input from a user, which then is compared to a template to determine a correlation factor. The correlation factor, a fixed code and either a time-varying code or a challenge code then are combined to generate a token. The token is displayed to the user, who then enters the token at an access device. The access device is coupled to a secure host system. wherein the host is an electronic banking system or an integrated circuit card
6. Zigher et al (US 5,731,575) discloses a device and method for the discrete identification of a duress transaction at an ATM banking machine. The device and method allows the customer to alert the police that a crime is taking place without alerting the criminal that an alarm has been

given by the entry of an access number equating to a non-prestored personal distress or emergency number in place of the stored PIN number. When an access number is entered to begin a transaction, the system compares the entered access number with the prestored PIN number. If the entered access number is the same as the PIN number, the transaction proceeds as normal. If not, an algorithmic function is applied to either the entered access number or the PIN number. These two numbers are then again compared and if after application of the algorithmic function they are the same, then the duress signal is triggered. Thus, the non-prestored personal distress number is successfully entered when the access number entered to begin the transaction equates to the PIN number after the algorithmic function is applied to either the entered access number or the PIN number.

7. Haverstock et al (US 6,701,376) discloses a client/server network enables access to non-HTML objects from a web browser. The system includes a database for storing non-HTML files. A system user requests a non-HTML file from a database using a web browser. The web browser transmits the requests to a server via a HTTP server and module. The server locates and retrieves the object requested. The device/method also provides role-based, multi-level security module 40 for controlling access to objects within the system. The system enables an authorized individual to assign users a defined role. Each role may have various privileges based on the priority level of the role.

8. The above prior art reference of record do not teach or render obvious the limitations as recited in independent claims 50, 60 and 70. Applicants have amended claims 50, 60 and 70 to recite the following limitations” *if a duress password is entered for authenticating the user, the processor replaces the data of the memory with non-sensitive data.* The combination of Gullman,

Zingher, and Haverstock does not render Applicants' claims obvious because the combination does not teach or suggest these features.

13. Dependent claims are allowed as they depend from an allowable independent claim.
14. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
